

China District Cooling webinar programs

Energy demand for cooling in China will increase from 250 TWh in 2016 to 960 TWh in 2050, becoming the world's second-largest cooling market. China is one of the largest District Cooling markets in the world. However, District Cooling developments suffer from scepticism as a result of unsuccessful developments decades ago. Now is the time to turn the tide.

The China District Cooling webinars aim to provide insights in the Chinese District Cooling sector, with speeches from, utilities, solution providers, associations and other stakeholders active in the Chinese District cooling market.
